

How to request/offer:

- should the person offer every morning by using the app or
- should the person offer as in a timetable set weekly
- or both options,

How to choose a ride:

- request a lift, what about being ignored,
- having a list of people and some info to choose from,
- should the information be provided to both?

Look into:

- having a database system about information,
- Priyav: server side ; send data into a database. Pars software give the basic database/server end for apps. handling geolocation data, howto store them. Get info from Nim and Tom.
- Agata: basic GUI buttons etc, Jira
- Vaneet: initial look into using maps.
- Daniel: Contact supervisor about mac developer licences and book iphones and using macs on campus.
- Agata, Daniel and Lin: GUI prototype.
- Lin: set up a meeting for wednesday around 2-3pm

Setting up GIT and common workspace will probably be discussed during the project lecture.
